BOXPACE HOSPITALITY

Full business overview and project handoff for Claude

Prepared 31 October 2026 from the available project files and conversation history.

Founder	Rishit Chandanshive
Markets	Karjat, Khopoli, Lonavala and nearby Maharashtra villa markets
Public website	https://boxpacehospitality.netlify.app/
Team Desk	https://boxpacehospitality.netlify.app/desk.html - private team workspace route
Contact	rcworks.luxe@gmail.com | +91 9833837560

Stays Beyond Ordinary

1. Business at a glance

Boxpace Hospitality (also referred to as Boxpace Hostings in earlier planning) is a proposed villa-hospitality business. It aims to work with villa owners to improve listings, pricing, availability, booking handling, guest communication and direct demand generation. Owners retain their property and agree the commercial terms and operating responsibilities with Boxpace.

The business has two customer groups: villa owners who may want help operating and marketing their stays, and guests seeking private villas for family and group trips. Current target markets are Karjat, Khopoli and Lonavala, with nearby destinations included where practical.

Founder and contact

Founder: Rishit Chandanshive. LinkedIn: linkedin.com/in/rishit-chandanshive-27415b1ab. Business email: rcworks.luxe@gmail.com. Phone: +91 9833837560. Legal business-name relationship between Boxpace Hostings and Boxpace Hospitality needs confirmation.

Business goals discussed

• Start with a target of 5 onboarded villas and build toward 10; these are targets, not current inventory.

• Focus mainly on 3-5 BHK homes; another prospecting note used 3-6 BHK.

• Serve families, friends and group travellers from Mumbai, Navi Mumbai, Thane and surrounding areas.

• Develop owner acquisition and guest booking channels in parallel.

Potential revenue sources include a fixed monthly property-management fee, a commission on agreed booking revenue, and direct or B2B group bookings. These are proposed streams; no signed owner contract or current operating portfolio is present in the files.

2. Services and customer journeys

For villa owners: property onboarding, listing creation and maintenance, OTA distribution, availability/calendar handling, pricing support, enquiry and guest communication, booking reporting, and owner coordination. Scope, service hours and on-site duties must be agreed property by property. No evidence shows Boxpace currently supplies housekeeping, maintenance staff, security, or on-site caretakers.

For guests: browse published villas, review property details, choose dates and group size, request availability and pricing, and send an enquiry or booking request. Do not claim instant availability or guaranteed booking until the property calendar and booking process are connected and tested.

Two separate lead pipelines are recommended: (1) owner acquisition from prospect to verified decision-maker, meeting, proposal, negotiation, signed agreement or lost; (2) guest reservations from enquiry to dates/guest qualification, quote, follow-up, availability/payment confirmation and booked/lost.

3. Pricing and planning figures

Several different fee options have appeared in planning. They conflict and none is confirmed; keep them separate until Rishit selects a model and signs owner-specific terms.

Option	Monthly fee	Booking commission	Status
A	INR 15,000 per villa	10%	Alternative discussed; not finalized
B	INR 8,000 per villa	12%	Alternative discussed; not finalized
C	INR 12,000 per villa	15%	Most recent projection model; still unapproved

Other figures used in planning

• Software budget: approximately INR 7,000-9,000 per month, not vendor-quoted.

• Marketing budget discussed: INR 10,000 per month, not an approved spend.

• INR 12,000/night appeared as a sample starting price for selected properties; it is not a portfolio-wide rate.

• INR 60-200 per Meta enquiry and estimates of 30-100 enquiries from a INR 6,000 ad test were illustrative only, not a forecast or guarantee.

Commission basis remains undefined. A contract must say whether it is based on gross booking value, room revenue or another amount, and how taxes, discounts, OTA fees, cancellations, refunds, direct bookings and owner payouts are handled.

A credible forecast needs property-specific rates by date and season, open nights, occupancy assumptions, average length of stay, channel mix, costs, cancellations, taxes, payments and owner settlements. Separate villa gross booking value from Boxpace revenue and profit.

4. Sales leads and market research

A regional tracker now contains 100 public-facing stay businesses and booking contacts: 53 assigned to Karjat, 6 to Khopoli and 41 to Lonavala. It includes villas, farms, resorts, booking operators and directory-sourced leads. This is a prospecting list, **not 100 confirmed independent villa owners**. Ownership and management status vary and should be confirmed before pitching.

No outreach has been sent through the tracker. Public numbers and email addresses should be rechecked; some records came from earlier research and some directory entries may be stale. Source URLs, owner/decision-maker fit, lead stage and outreach priority are included in the spreadsheet.

Suggested early tools were Google Sheets and WhatsApp Business. HubSpot was mentioned as a later CRM option. The live Google Sheet is titled Boxpace Hospitality - Regional Villa Leads; open the formatted 100-contact tracker.

5. Brand, website and software

Current public site: https://boxpacehospitality.netlify.app/. It includes homepage, properties, services, owners, about, contact and property-detail experiences. The public brand identity uses a navy/teal and gold Boxpace logo. The supplied contact details are rcworks.luxe@gmail.com and +91 9833837560; LinkedIn is above.

The Team Desk route is /desk.html and is intended to be private for the founder/team. Do not place it in public navigation or expose owner contacts, guest details, or commercial terms through public APIs. The code package includes the static site, desk frontend, Netlify Functions and deployment files.

The included backend code uses Netlify Functions and Netlify Blobs. The dashboard password is intended to be set as BOXPACE_DASHBOARD_PASSWORD in Netlify environment variables; never add the value to code, prompt, screenshots or commit. Verify current deployed configuration. The deployment notes say the site was previously published as static files and that Functions require a Netlify Git-connected/CLI deployment; therefore do not assume

backend sync is already live just because the public site loads.

OTA limitation: the current calendar work is iCalendar/ICS based date-block synchronization. It is not an official Airbnb, Booking.com or MakeMyTrip API connection; the code should not be described as a fully synced commercial channel manager. The earlier Doorloom plan was set aside when Rishit asked to build his own system.

6. Booking, calendar and operating model

Desired product direction: an owner/property-management area where Rishit can add property photos, descriptions, capacity and pricing; published property details should appear professionally on the public properties pages. Guests should select a property and dates, check availability and receive a property-specific quote. Confirmed bookings should block inventory, feed a booking calendar and allow export to Excel with villa, tariff, guest and dates.

Implementation cautions: availability must come from a trusted calendar source; prevent duplicate bookings; distinguish enquiry from confirmed booking; record who approved rates and blocks; maintain a change log; protect guest information; and reconcile guest payments with owner payouts. OTA availability sync needs vendor/API verification. If imports fail, show a clear error and manual fallback.

Proposed booking lifecycle

Enquiry -> qualify dates, guest count and fit -> check availability -> owner approval if needed -> quote -> payment/booking confirmation -> close dates across the authoritative calendar -> send guest instructions -> stay support -> checkout/issue handling -> reconcile payment, costs and owner payout -> report to owner.

7. Compliance, documents and risk controls

Prior conversation states the business is a sole proprietorship in Maharashtra and that Udyam registration was completed. No Udyam certificate/number, GST status, signed owner agreement, property registration, insurance proof or local permission was found among the files inspected. Treat every such status as unverified until documents are supplied. Verify legal and tax requirements with qualified local professionals and authorities.

• Confirm the public/legal relationship between Boxpace Hostings and Boxpace Hospitality.

• Select one fee model and define commission calculation, cancellations, tax, payment and settlement.

• Confirm owner authority, property permissions, safety, insurance, guest identity requirements and property-specific rules.

• Keep credentials in Netlify environment variables; never send a password or API key to Claude.

• Use only owner-approved photos, rates, availability, claims and property details in public listings.

8. Practical launch sequence

Phase	Work to complete
1. Decide offer	Confirm legal brand, service boundaries, target property profile, pricing model and commission basis.
2. Sign supply	Qualify owners, verify authority and property readiness, define responsibilities, sign agreements and collect approved property content.
3. Configure systems	Select PMS/channel software only after checking capabilities and total cost; set lead/booking records, payment flow, calendar rules, password protection and backups.
4. Test and launch	Test one property from enquiry through booking, calendar closure, cancellation and owner settlement; verify actual Netlify deployment and access controls.
5. Measure and scale	Track response times, qualified leads, quotes, conversion, booked revenue, Boxpace margin, owner payouts, guest issues and operating capacity before scaling toward 10 properties.

9. Decisions Claude should help Rishit make

- Which public/legal brand name should appear on contracts and customer communications?
- Which pricing model is preferred, and what exactly is the commission base?
- What are the first real properties, owners, photos, rates and available dates?
- Who accepts guest money, approves bookings, handles refunds and pays the owner?
- What is the first reliable source of inventory availability: owner calendar, iCal feed, PMS or manual approval?
- What software, launch date and monthly cash budget are actually approved?
- What documentation proves Udyam registration and current GST/compliance status?

Prepared as a planning handoff, not a legal, tax, revenue or compliance approval. Figures and statuses explicitly marked unconfirmed must not be presented as facts.
